# CAO-46 GR

## Premium Synthetic Compressor Lubricant

CAO-46 GR is formulated to be completely compatible with virtually all OEM polyalkylene glycol (PAG) compressor fluids. Its full compatibility with these fluids means that time-consuming flushes are no longer required. CAO-46 GR can even be used to top-off an existing OEM PAG compressor fluid.

### Enhanced Resistance Against Water Contamination

OEM PAG compressor fluids are well known for their tendency to emulsify when contaminated by water. This makes it very difficult to remove excess water from the system, which often leads to premature compressor-fluid change-outs, rust and corrosion issues, and decreases in bearing and component life. CAO-46 GR's enhanced resistance against water contamination offers a solution to this common problem.

CAO-46 GR lubricants resist water contamination, typically separating in two distinct layers.

OEM PAGs like Sullube often form an emulsion when contaminated by water.

### Longer Fluid Life

Both laboratory and in-the-field tests have demonstrated that CAO-46 GR lubricants offer a longer fluid life and better oxidative stability than most OEM PAG compressor fluids.

### Enhanced Carbon and Varnish Control

CAO-46 GR's low volatility and enhanced carbon and varnish control lead to cleaner operations as well as reduced downtime and maintenance costs.
